

SUMMARY

Frontend-focused Software Developer with 1 year of experience building scalable web applications using React.js, TypeScript, and modern frontend architectures. Experienced in developing dashboard systems, integrating REST APIs, contributing to microfrontend migration, and optimizing frontend development workflows in a product-based startup environment.

EDUCATION

Crescent University <i>B.Sc. Computer Science — GPA: 8.9/10</i>	Vandalur 2020 – 2023
College of Engineering <i>MCA, Computer Applications — GPA: 7.7/10</i>	Guindy 2023 – 2025

WORK EXPERIENCE

Roboteon India Pvt Ltd <i>Software Developer</i>	Location Jun 2025 – Present
- Developed and maintained responsive dashboard applications and internal management modules using React.js, TypeScript, Material UI, and REST API integrations. - Built internal platforms including attendance management, leave management, and appraisal dashboard systems to streamline organizational workflows. - Contributed to migration towards a microfrontend architecture using Vite Module Federation with shared and remote packages, improving application modularity and scalability. - Integrated GitLab APIs into internal frontend applications to improve development workflow visibility and operational efficiency. - Optimized frontend development workflow by restructuring the Vite-based architecture to improve Hot Module Replacement performance and reduce unnecessary full-page reloads during development. - Worked collaboratively within an 8-member engineering team, coordinating with backend developers for API integration and feature delivery. - Developed and experimented with interactive 3D frontend elements using Three.js to enhance user experience and interface interactivity. - Identified and resolved performance bottlenecks in a microfrontend-based Three.js application by implementing a shared global canvas architecture, eliminating redundant canvas mounts during route transitions and reducing rendering overhead by approximately 50%.	

PROJECTS

- 3D Portfolio Website:** Developed a personal portfolio website featuring interactive 3D elements and responsive UI components using React.js, Three.js, JavaScript, and CSS to showcase projects and technical skills.
- Exoplanet Habitability Prediction:** Built a machine learning-based web application to analyze and predict exoplanet habitability using Python, Google Colab, React.js, and scientific datasets. Implemented preprocessing, feature engineering, and model integration with a frontend interface for visualization and prediction workflows.
- AWS Feedback Analysis Application:** Developed a cloud-based feedback analysis application to explore AWS services including Lambda, S3, and Amazon Comprehend for automated sentiment analysis workflows.

SKILLS

Languages: JavaScript, TypeScript, Python, HTML, CSS
Frontend: React.js, Material UI, Three.js, Responsive Web Design, Microfrontend Architecture
Backend & APIs: Node.js, Express.js, REST APIs
Tools & Platforms: Git, GitLab, AWS, Vite
